

SUSTAINABLE EVENT MANAGEMENT POLICY OF THE AUTODROMO NAZIONALE MONZA

The Autodromo Nazionale Monza, one of the most renowned historic venues in the global motorsport scene, recognizes the importance of responsible and sustainable management of its operations. With a concrete commitment to reducing environmental impact and improving social conditions, the Autodromo aims to become a model of excellence in sustainable event management, in accordance with ISO 20121 guidelines. This policy ensures that all activities, both daily and extraordinary, are managed with the utmost attention to the environment, the local community, and cultural heritage.

Scope

This policy applies to all operations of the Autodromo Nazionale Monza, including organized events, planning, logistics, resource management, and interactions with all stakeholders, such as the local community, suppliers, participants, and visitors. It specifically addresses natural resource management, community engagement, and continuous improvement in sustainability performance.

Policy Principles

1. Environmental Sustainability

The Autodromo is committed to reducing environmental impact through the responsible management of natural resources. This includes adopting eco-friendly practices throughout all phases of an event, from planning to execution. Waste separation, use of recyclable, and compostable materials and efficient use of resources such as water and energy will be promoted.

Resource management will be a key objective, supported by modern technologies and innovative solutions to minimize waste.

2. Use of Renewable Energy

Energy sustainability is a crucial goal. The Autodromo aims to promote the use of renewable energy sources such as solar power and other eco-friendly solutions to power its facilities and activities.

Events that employ low-impact technologies—like photovoltaic systems and energy storage solutions—will be encouraged to reduce reliance on non-renewable energy sources and lower greenhouse gas emissions.

3. Promotion of Sustainable Transport

Sustainable event management includes a concrete commitment to low-emission transport and public transit use. The Autodromo will promote solutions encouraging visitors to use public transportation or electric/low-emission vehicles. Low-impact shuttle services will be organized during major events, and the use of bicycles and shared mobility options will be encouraged.

The Autodromo will also provide all necessary information to support sustainable access to the venue with eco-friendly transport options.

4. Stakeholder Engagement

The Autodromo is committed to building solid and constructive relationships with all stakeholders, including the local community, suppliers, business partners, and visitors. Actively listening to the needs and concerns of each party is essential for inclusive and responsible management.

Meetings, roundtables, and consultation sessions with stakeholders will be held to assess and improve sustainable practices and community involvement.

5. Training and Awareness

Staff training and visitor awareness are central to this policy. The Autodromo will implement educational programs for internal staff to encourage behavior and practices aligned with sustainability principles.

During events, initiatives will be launched to raise public awareness of environmental sustainability through information campaigns, educational materials, and hands-on activities that promote responsible behavior.

6. Monitoring and Continuous Improvement

A core aspect of this policy is monitoring sustainability performance. The Autodromo commits to collecting detailed data on the environmental impact of each event and activity to identify areas for improvement.

Measurable goals will be set for emission reductions, energy consumption, and waste management. Annual reviews will be conducted to assess progress and define corrective actions.

7. Event Impact and Sustainable Legacy

The Autodromo aims to ensure that each event contributes concretely to creating a sustainable legacy. This means integrating ecological and socially responsible practices throughout every phase of the event life cycle—from planning to operations and beyond dismantling. The goal is to generate lasting positive impacts on the area, fostering a development model that considers environmental, economic, and social needs for future generations.

A key part of this commitment is enhancing the natural and cultural heritage surrounding the Autodromo. Located within Monza Park, a unique setting for its history and biodiversity, each event should serve as a tool for protecting and promoting its landscape. This includes safeguarding green areas, reducing emissions, managing waste responsibly, and encouraging sustainable behavior among the public.

At the same time, efforts will be made to improve accessibility to the Park, making it more inclusive and user-friendly, and to activate partnerships with local entities to strengthen the bond between the Autodromo, the city and its cultural heritage. Thus, the sporting event becomes not only a moment of entertainment but an opportunity to leave a positive and lasting mark on the territory.

Commitment to the Policy

The management of the Autodromo Nazionale Monza is actively committed to implementing this policy, providing the necessary resources for its application. Staff, stakeholders and visitors will be continuously updated on goals and results achieved, fostering a culture of transparency and accountability.

This policy will be periodically reviewed to ensure it remains current, appropriate and aligned with the latest developments in sustainability and will be updated based on technological advancements and community needs.
